

## MAVEN:

There may be following solutions-

1. Convert project into maven project(if maven nature is not there in project configuration)
2. Check Maven Dependency Library in Build Path. None of the dependency should throw error.

If problem still persist then-

1. Open terminal, goto the project folder where pom.xml is present and run `mvn eclipse:eclipse` command in terminal and refresh the project in eclipse.
2. run `mvn clean install` to install jar in local repo(.m2) (run `mvn clean install -Dmaven.test.skip=true` if you want to skip test cases.)
